

VDL Industrial Products

Strength through co-operation

VDL Industrial Products

ONLY THE BEST IS GOOD ENOUGH FOR YOUR ORGANIZATION. THEREFORE WE AT VDL INDUSTRIAL PRODUCTS INVITE YOU TO GET TO KNOW US BETTER BY VISITING OUR COMPANY, WHERE HIGH-QUALITY ADVICE, PRODUCTS AND SERVICE ARE TOP PRIORITIES. BECAUSE YOU VALUE RELIABLE QUALITY, WHETHER IT CONCERNS FIRE AND EXPLOSION PROTECTION OF INDUSTRIAL PROCESSES OR COMPONENTS FOR EXTRACTION SYSTEMS AND BULK HANDLING. YOU KNOW BETTER THAN ANYONE THAT QUALITY MATTERS. A LONGER SERVICE LIFE AND REDUCED, SIMPLER MAINTENANCE RESULT IN CONCRETE CONTRIBUTIONS TO THE PROFITABILITY OF YOUR BUSINESS.

VDL Industrial Products has its roots in two worlds. We have been active for decades as a leading advisor and manufacturer/supplier of components for transport and extraction systems and the processing of bulk goods. A portion of these components are developed in-house. Our main focus is on drop-through rotary valves, which set the standard in many branches of industry. We also offer a complete range of systems and components for fire and explosion protection of industrial processes. In this area, too, our professional advice and products with an outstanding price/quality ratio form a long-proven combination.

COMPONENTS FOR TOTAL SOLUTIONS

Our great strength lies in the development and provision of components for total solutions. Clients see our advisors as an expert or sparring partner. They employ their knowledge and experience to create optimal, achievable solutions. That ranges from objective advice about what is possible and desirable to complete production and installation. And naturally: quick service in support of your production process. In fact, VDL Industrial Products is becoming a one-stop shop that is focused on quality at all levels. The result is the certainty and simplicity that comes from having a single partner.

FIRE AND EXPLOSION PROTECTION

When it comes to the protection of industrial processes, there's nothing less at stake than the safety of your people and your organization. To a large degree, that understanding determines our thinking and actions. And because no two systems are exactly alike, our engineers almost always provide custom solutions. Only then can we provide the desired assurances without compromise. And that means we can stand behind the chosen solution 100%. In addition, we only work with certified, thoroughly tested materials. Products that have proven themselves in practice. VDL Industrial Products only trusts and works with renowned companies, partners that are active throughout the world and can put their broad knowledge and experience alongside ours to assist your organization.

VDL Industrial Products is active in five areas:

- explosion suppression
- explosion venting
- explosion isolation
- explosion prevention
- fire protection

BULK HANDLING

The roots of VDL Industrial Products lie in the delivery of installations and components for internal transport - the handling and storage of dry goods. With so many years of experience, today we are known in every branch that relies on bulk handling. Our experienced engineers provide practical advice about any desired solution for the handling and storage of dry goods.

Among the components and systems produced and supplied by VDL Industrial Products are: pipe and distribution systems, pipe connectors, turn-head distributors, drop-through rotary valves, blow-through rotary valves, high-pressure fans, slide valves, butterfly valves and diverter valves.

EXTRACTION

VDL Industrial Products has produced drop-through rotary valves for a huge range of applications since the end of the 1970s. The valves have come a long way since then. Thanks to the simple, carefully thought-out construction, the valves have a proven maintenance-friendly design, which makes them economical to use, both for the installer and the end user. The quality of the valves is representative of the quality of the other components and systems in the complete range offered by VDL Industrial Products. Our own engineering department provides advice and, if desired, will even design special versions of products to meet your requirements and wishes.

Among the components and systems that VDL Industrial Products produces are: pipe systems, pipe connectors, cyclones and separators, fans and sound dampers, slide valves, flexible hoses, extraction systems and dust valves.

STRONG IN ADVICE

A good installation begins with good advice. The engineers at VDL Industrial Products prove in practice that they are experts in translating the requirements of installers and end users into practical solutions. Solutions in which the high quality of materials and components is crucial. This guarantees a high level of durability. Because we also never lose sight of the importance of designing for ease of maintenance, you can rest assured that our solutions will contribute to the profitability of your organization.

THE ESSENTIALS

- Explosion protection
- Fire protection
- Bulk handling
- Extraction
- From advice through completion
- Proven knowledge and experience
- In-house production capacity
- Partnerships exclusively with renowned brands
- Components and systems

VDL Groep

VDL Industrial Products is part of VDL Groep, an international company with approximately 7,500 employees, spread over 77 subsidiaries in 16 countries. The strength of the co-operation within VDL Groep offers added assurance in terms of continuity to customers and suppliers of VDL Industrial Products alike.

VDL Industrial Products operates in the finished products sector. This sector comprises suspension systems for the automotive industry, production automation systems, heating, cooling and air-technical systems, systems for the oil, gas & petrochemical industry, sunbeds and roof boxes, systems for the agricultural sector, explosion protection and bulk handling, cigar-making and packaging machines, container handling equipment, medical systems and production systems for optical media.

The other sectors comprise supplies and buses & coaches. In the supply sector, VDL specialises in metalworking, mechatronic systems and system supply, plastics processing and surface treatment. The bus & coach division includes coaches, chassis modules, public transport buses, mini & midi buses and second-hand buses.
